

Product Safety Information

1. Identification of the Product and Supplier

Product name:	Pipeinoc®
Product application:	Inoculant and mold powder for centrifugal cast iron pipe manufacture.
Address/Phone No.:	Elkem ASA Silicon Products P.O. Box 334, Skøyen, NO-0213 Oslo, Norway Telephone: + 47 22 45 01 00 https://www.elkem.com/no/elkem-silicon-products/ support.siliconproducts@elkem.com
REACH et CLP Site Web:	https://echa.europa.eu/support/helpdesks/
Emergency Phone No.:	not applicable for non-hazardous substances.
2. Hazards Identification	

Classification:

The product does not meet the criteria for hazard classification in accordance with Regulation (EC) No1272/2008 (CLP) and the UN Globally Harmonized System of Classification and Labelling of Chemicals (GHS), 9th revision.

N/A (not applicable)
N/A (not applicable)
N/A (not applicable)
N/A (not applicable)

The product is not identified as having endocrine disrupting properties in accordance with the criteria set out in Commission Delegated Regulation (EU) 2017/2100 or Commission Regulation (EU) 2018/605.

Flammable and noxious gases may be formed in contact with moisture, acids or bases, or at high temperatures. See section 10 and 11.

Dust suspended in air may under certain conditions cause dust explosions. See section 10.

3. Composition/Information on ingredients

Chemical composition:

Constituent	CAS No.	EINECS No.	Weight %	Classification: 1272/2008/EC, Annex VI, Table 3.
Ferrosilicon (FeSi)	8049-17-0	-	30 – 95	-
Calcium silicide (CaSi)	12737-18-7	-	0 - 60	-
Calcium fluoride (CaF ₂)	7789-75-5	232-188-7	0-15	-

FeSi is registered under REACH as a "multi-constituent substance" as reaction mass of iron and iron disilicide and iron silicide and silicon" with number 912-631-7.

The product is based on a mechanical mixture of different materials.

© COPYRIGHT ELKEM ASA 2023

4. First Aid Measures

Inhalation:	Irritation caused by dust: Fresh air. See a physician on persistent feeling of discomfort.
	Phosphine/arsine intoxication: Seek medical attention. See section 11.
Skin contact:	Wash skin with water and/or a mild detergent.
Eye contact:	Rinse eyes with water/saline solution. See a physician on persistent feeling of discomfort.
Ingestion:	Remove the person affected from dust-exposed area. See inhalation.

5. Fire Fighting Measures

Extinguishing media: Dry sand, CO₂ or dry powder.

The product is not combustible. Dust suspended in air may under certain conditions cause dust explosions. See section 10.

6. Accidental Release Measures

Material in the form of dust should be collected in suitable containers. Damp product must be kept away from dry, and must not be collected and stored in closed containers. Dry dust can be vacuumed or swept up.

7. Handling and Storage

Handling: Avoid handling that generates dust build-up. Avoid inhalation of dust. See section 8. Avoid ignition sources (e.g. welding) in areas with high dust concentrations. Addition of wet material to molten metal may cause explosions. See section 10.

Storage: The product must be kept in a dry and well-ventilated place, and away from acids and bases.

Inadequate ventilated containers:

It is advisable to allow 15 minutes of natural venting with fully open doors so that fresh air can freely enter the container before starting to unload/strip the containers.

Opening of containers should preferably be done outdoors, but only under conditions whereby the product is kept dry.

In case there is a need for immediate stripping (i.e. less than 15 minutes waiting), always wear a full face mask respirator with gas/vapour filter according to standard EN14387 during the unloading period.

8. Exposure Controls/Personal Protection

A. Occupational exposure controls

Eye protection, eye flushing facilities and protective gloves. Ensure good ventilation. Wear a particulate respirator according to EN 149 FFP 2S in areas of inadequate ventilation. If exposure to phosphine and arsine is suspected (see section 10) in areas of poor ventilation (e.g. storage holds, bunkers etc.), a self-contained breathing apparatus or an air fed respirator should be worn.

For opening and immediate stripping of inadequate ventilated containers, always wear respiratory protective equipment (RPE) as stated in section 7.

Workplace Exposure Limits (HSE, EH40/2005) Table 1: List of approved workplace exposure limits (as consolidated with amendments, December 2011):

Substance	CAS number	8 hour TWA		15 minute STEL	
		ppm	mg/m³	ppm	mg/m³
Inhalable dust	-	-	10	-	-
Respirable dust	-	-	4	-	-
Phosphine gas (PH ₃)	7803-51-2	0.1	0.14	0.2	0.28
Arsine gas (AsH ₃)	7784-42-1	0.05	0.16	-	-
Fluoride (as F)	16984-48-8	-	2.5	-	-

EU OEL: Commission Directive 2006/15/EC Indicative occupational exposure limit values:

Substance	CAS number	8 hour		15 minute	
		ppm	mg/m ³	ppm	mg/m ³
Phosphine	7803-51-2	0.1	0.14	0.2	0.28

Elkem has devised a "Procedure for sampling, measuring and reporting of phosphine (PH₃), arsine (AsH₃) and airborne particulates" of the workplace atmosphere (1994). The low occupational exposure limit for arsine gas is due to the evidence for carcinogenicity in humans of inorganic arsenic compounds in general (IARC). The OEL for dust does not cover possible arsine/phosphine absorption from dust deposited on mucous membranes.

DNEL (Derived No Effect Level):

4 mg/m³, proposal for inhalable FeSi particles (determined as Si). 0.3 mg/m³, proposal for respirable FeSi particles (determined as Si).

B. Environmental exposure controls

Limit values for PM₁₀ and PM_{2.5} (Directive 2008/50/EC):

	Averaging period	Limit value
PM10	One day	50 µg/m³★
PM10	Calendar year	25 µg/m ³
PM _{2,5}	Calendar year	15 µg/m³

★Not to be exceeded more than 30 times a calendar year.

9. Physical and Chemical Properties

Form	: Powder, grain fractions.
Grain size	: primary particles < 0.35 mm
Colour	: Grey/black
Odour	: Odourless.
Solubility (Water)	: Insoluble/slightly soluble.
Melting point (°C)	: > 1200
Apparent density (kg/m ³)	: Approx. 3300
Bulk density (kg/m ³)	: Approx. 1800

10. Stability and Reactivity

Conditions to avoid:

Avoid generating sparks and other ignition sources (e.g. welding) in areas with high dust concentrations. Fines of the product suspended in air can cause dust explosions, but specific data are not available. FeSi-particles suspended in air at concentrations above 100-300 g/m³ can cause dust explosions. For a given particle size, the ignition sensitivity and the violence of explosion decrease with decreasing Si/Fe ratio. Dust with Si/Fe ratio \leq 2 and particle diameter > 10 µm, is considered not to represent any danger of explosion. Addition of wet material to molten metal may cause explosions. Materials to avoid:

Water/humidity, acids and bases.

Hazardous decomposition products:

Highly flammable hydrogen gas (H₂) and the highly flammable and very toxic gases phosphine (PH₃) and arsine (AsH₃) (garlic-like smell), may be formed if FeSi gets in contact with moisture, acids or bases. A prerequisite for phosphine and arsine gas formation is the presence of reactive phosphides or arsenides, such as e.g. Ca_3P_2 or Ca_3As_2 at the alloy phase-boundaries inside the alloy. Very low levels of P (< 0.02 %) and As (< 0.0005 % detection limit) in FeSi, in combination with rapid solidification that limits segregation of the alloying elements, effectively minimize the formation of such compounds and thus the probability of gas formation.

Phosphine (PH₃) and arsine (AsH₃) are both heavier than air and may concentrate at the bottom of closed containers. Densities (25 °C, 1 atm), PH₃: 1.379 g/L, AsH₃: 1.321 g/L, air: 1.225 g/L.

Phosphine (PH₃) gas may accumulate in inadequate ventilated/closed containers during shipment and storage, and in these cases special measures are needed during initial opening and unloading of containers (see sections 7 and 8).

A reaction with hydrofluoric acid (HF) or nitric acid (HNO₃) leads to the formation of toxic gases such as silicon tetrafluoride (SiF₄) or nitrous gases (NO_x).

Toxic SiF_x-gases may be formed at elevated temperatures (>1000 °C).

Wet product will form highly flammable hydrogen gas if added to molten metal, due to decomposition of water.

11. Toxicological Information

The product does not meet the criteria for hazard classification according to Regulation (EC) No1272/2008 (CLP) and the Globally Harmonized System of Classification and Labelling of Chemicals (GHS), 9th revision.

Acute effects:

Inhalation: Finely divided dust may irritate and dehydrate mucous membranes.

Phosphine/arsine may be absorbed from dust deposited on mucous membranes.

Containers: Phosphine/arsine may be inhaled inside and close to newly opened inadequate ventilated containers.

Phosphine irritates exposed mucous membranes, depresses the central nervous system (CNS) and can cause oedema of the lungs. Acute, non-fatal poisoning with phosphine gives temporary effects, among others headache, malaise, vomiting, stomach pains, cough, and difficulty in breathing.

- Skin contact: Dust may irritate the skin.
- Eye contact: Dust may irritate and lead to dryness.

Chronic effects:

No adverse chronic effects of this product expected, based on both practical experience and review of available scientific literature. Historic, epidemiological studies covering cohorts of workers in the Norwegian ferro-alloy industry have been carried out as demonstrated by the list of reference literature, showing there is no cancer risk from this product.

Endocrine disrupting properties:

The product is not identified as having endocrine disrupting properties in accordance with the criteria set out in Commission Delegated Regulation (EU) 2017/2100 or Commission Regulation (EU) 2018/605.

12. Ecological Information

The product is not characterised as dangerous for the environment.

MOBILITY:	The alloy has poor mobility under normal environmental conditions.
PERSISTENCE:	Not relevant for the elements in the alloy.
BIOACCUMULATION: ECO-TOXICITY:	Not relevant, due to low mobility and non-dispersive use. The product does not meet the classification criteria for ecotoxicological endpoints in accordance with Regulation (EC) 1272/2008 (CLP) and the UN Globally Harmonized System of Classification and Labelling of Chemicals (GHS), 9 th revision.

PNEC (Predicted No Effect Concentration): N/A

Endocrine disrupting properties:

The product is not identified as having endocrine disrupting properties in accordance with the criteria set out in Commission Delegated Regulation (EU) 2017/2100 or Commission Regulation (EU) 2018/605

13. Disposal Considerations

The material should be recovered for recycling where possible.

Waste from the product is not considered as hazardous waste according to Commission Decisions 2000/532/EC and 2001/118/EC.

Prior to disposal of large quantities of this material, advice should be sought from the nearest Environment Agency.

14. Transport Information

UN no.:	1408
IMDG-code1):	Not assigned to class 4.3*
ICAO/IATA ¹⁾ :	Not assigned to class 4.3
ADR/RID ¹⁾ :	Not assigned to class 4.3

* Substances which in contact with water emit flammable gases.

¹⁾ Consignments of ferrosilicon with a chemical analysis as described in section 3 has been tested according to "United Nations Recommendations on the Transport of Dangerous Goods, Manual of Test and Criteria Part III -33.4.1.4" and has passed the test. Consequently, the product is not classified as a Class 4.3 product.

FeSi is not considered to cause harm to aquatic organisms (Lillicrap, 2011). FeSi is not a marine pollutant.

15. Regulatory Information

The text of this Product Safety Information is prepared in compliance with:

- Regulation (EC) No 1907/2006 of the European Parliament and of the Council of 18 December 2006 concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH) and subsequent amendments.
- Regulation (EC) No 1272/2008 of the European Parliament and of the Council of 16 December 2008 on classification, labelling and packaging of substances and mixtures, amending and repealing Directives 67/548/EEC and 1999/45/EC, and amending Regulation (EC) No 1907/2006.

16. Other Information

According to Chapter 1.5.2 of the UN Globally Harmonised System of classification and labelling of chemicals (GHS), Article 58 (2)(a), and Article 59(2)(b) of (EC) No 1272/2008 (CLP), which amends REACH article 31(1), safety data sheets (SDS) are only required for substances and mixtures that meet the harmonised criteria for physical, health or environmental hazards. Since this product does not meet these criteria, a SDS according to 2020/878/EU is not issued. In order to communicate relevant HSE-(health, safety and environmental) information, this product safety information (PSI) is provided instead.

REACH article 31(7) requires relevant exposure scenarios from the Chemical Safety Report (CSR) to be annexed to the SDS. However, according to REACH Annex I, section 0. (Introduction), subsection 0.6. no 4 and 5, exposure scenarios are only required for hazard-classified substances or mixtures. Since this product is not hazard-classified according to CLP, there is no requirement for exposure scenarios.

In accordance with REACH article 31(5), safety data sheets shall be supplied in an official language of the Member State(s) where the substance or mixture is placed on the market. This obligation, however, only applies for hazard-classified products which require a formal SDS. Since this product is not hazard-classified, the product safety information (PSI) is, in accordance with current regulation, provided in English language only.

Changes from rev.00 to rev 01: new logo, composition update, reference to GHS 9th rev., assessment of EDC properties in section 2, 11, 12, reference to 2020/878/EU.
